ABSTRACT

Branding is a critical marketing system which motivates customer's perspective and purchasing behavior on time basis. Brand equity is an important issue in marketing construct, which has been shown to influence marketing variables such as consumer's choice. The concept "brand image" has drawn significant attention from academics and practitioners since it was put forward, because it played an important role in marketing activities. Although brand image was recognized as the driving force of brand asset and brand performance, few studies have elaborated on the relationship between brand image and brand equity. Based on the brand image theories, this study reviewed extant studies about the impact of brand image on consumer from perspective of customer equity. It also presented the shortcomings of current research and pointed out the trends for future study.

Keywords Brand Image, Brand Equity, Customer Equity, Consumer Behavior.

INTRODUCTION

Brand Image could be defined as a brand that is brought to the consumer's mind by the brand association. Brand be also defined image can consumer's thoughts and feelings about the brand. It is the key driver of brand equity, which refers to consumer's general perception and feeling about a brand and has an influence consumer behavior. For marketers. whatever their companies marketing strategies are, the main purpose of their marketing activities is to influence consumer's perception and attitude toward a brand, establish the brand consumer's mind. image in stimulate consumer's actual purchasing behavior of the brand. therefore increasing sales, maximizing the market share and developing brand equity.

Brand equity based upon the promising relationship of customers with the branded

products. It is the focus of both academics and practitioners; however, there is no paradigm among the brand equity studies by now. Most studies measure brand equity from perspective

of consumer or from the company itself. On one hand, some researchers believe that consumer's subjective perception (e.g., attitude, assessment, satisfaction, etc.) of the brand is the key to brand equity. Although the consumption decision will be influenced by brand features and attributes, it is determined by consumer's perception about the brand image in a deeper sense. Despite the change of consumer's life style and the way of information processing, brand image remains the dominant impact factor of consumption decisions. On the other hand, some researchers believe that brand equity should be evaluated in terms of market share, market value and cash flow.

Financial performance can described as brand premium and financial market share; non the performance refers to brand awareness, brand reputation, brand loyalty and brand association. Following the brand equity analysis the perspective of consumer and perspective of non-financial performance, this study analyzes the

relationship between brand image and brand equity by examining consumer's attitude and purchase intention.

2. THE LITERATURE REVIEW ABOUT BRAND IMAGE

"Brand", having a long history, is a comprehensive term and it is possible to find many different definitions about the brand in the literature. According to Kavas, brand is "Everything that is offered by a company to consumers or customers in a product category and everything that it is different from its competitors" (Kavas, 2004). According to Knapp, brand is "The Variety of something characterized by some different attributes" (Knapp, 2000)

2.1. BRAND IMAGE

Brand Image could be defined as a brand that is brought to the consumer's mind by the brand association (Keller, 1993). Brand image can be also defined consumer's thoughts and feelings about the brand (Roy & Banerjee, 2007). Aaker (1991) assert that brand image could be a significant to the consumer's. Based on Bearden & Etzel (1982) as well as Park & Arinivasan (1994) arguments, brand image is closely related to the

uniqueness of a particular product classification.

According to Park et al. (1986), the construction and maintenance of the brand image is prerequisite to the brand management. Theoretically, products and services could be demonstrated by functional, symbolic or experimental elements, through which brand image is established. Up to now, scholars haven't come to an agreement on the definition of brand image. Throughout prior literature, researchers define brand image mainly from four perspectives: blanket definitions, meanings and messages, personification, cognitive or psychological elements, as displayed in Table 1.

3. BRAND IMAGE AND CONSUMER BEHAVIOR

Blackwell et al. (2001) observed that consumer behavior is a set of activities in which they possess, consume and dispose products and services. Brand image has been studied extensively since the 20th century due to its importance in building brand equity. In the increasingly competitive world marketplace, companies need to

have a deeper insight into consumer behavior and educate consumers about the brand in order to develop effective marketing strategies. In the following paragraph, we will discuss the relationship between consumer's cognition of brand image and consumer behavior.

3.1. IMPACT OF BRAND IMAGE ON CUSTOMER'S ATTITUDE TOWARD THE BRAND

Keller came up with the concept "customer-based brand equity (CBBE)" in 1993, which refers to the various reactions to the branding campaign from consumers who have knowledge of

the brand in varying degrees. In other brand image words, and brand awareness are the basis and sources of equity. According to brand Keller (1993), positive brand image could be established by connecting the unique and strong brand association with consumer's memories about the brand through marketing campaigns. In this regard, the brand knowledge should be understood before built and the consumers could respond positively to the branding campaign. If consumers knowledge of a brand, have company could spend less on brand extension while achieve higher sales.

		the product or service
	Martineau	Brand image reflects consumer's
Personification	(1957)	characteristics, and they purchase the
		brand to express them self
	Bettinger	The personification of a product, which
	(1979)	can be manifested as "adult" and
		"children"
	Sirgy (1985)	Image of the brand resembles human
		personality
	Gardner &	Brand image is consisted of consumer's
	Levy (1955)	opinion, attitude and emotion toward a
Cognitive or		brand, which reflects the cognitive or
psychological		psychological elements of the brand
elements	Levy (1978)	Consumer's overall impression about a
		brand or product, which includes
		recognition, feeling and attitude toward
		it
	Bullmore	Consumer's general perception and
	(1984)	opinion of a brand's total attributes
	Kapferer (1994)	Consumer's general perception about
		the brand feature's association

Following Keller (1993), Lassar et al. (1995) held the opinion that brand equity came from the consumer's confidence in a brand. The greater the confidence they place in the brand, the more likely they are willing to pay a high price for it. Specifically, this confidence stems from five important

considerations: first, the brand performs its functions as designed; second, the social image is associated with purchasing or owning the brand; third, consumer's recognition and sentimental attachment with brand; fourth, the balance between the brand's value and its functionalities; fifth,

consumers trust in the brand. Netemeyer *et al.* (2004) also approved the dominant impact of brand equity on customer response toward the branding campaign.

With the proliferation of brands in the market, consumers make their purchase decisions largely depending on the brand image rather than the product itself. Moreover, when the brand image is consistent with the consumer's self-concept, the consumers would give a preference to it. According to the self-concept theory, one's self concept is a collection of perception about himself that includes elements such as capabilities, characteristics, shortcomings, appearance and personality. For marketers, examining the consistency between the brand image and consumer's self-concept is very important, because consumers might display various self-concepts in different social context. But whatever the context is, consumers would think better of the brand as long as the brand image is in line with the their selfconcept.

3.2. IMPACT OF BRAND IMAGE ON CONSUMER'S BEHAVIORAL INTENTION

Looking through extant researches, the most widely used predictors of consumer's behavioral intention are customer satisfaction and customer loyalty.

Teng, Laroche and Huihuang (2007) stated the purchase intention of the specific brand needs assessments of all available brands. Customers experience diverse assessment criteria when making any purchase decision for example brand, prices, features, quality, performance, user friendliness and convenience Khan *et al.* (2012).

Customer satisfaction refers to consumer's general evaluation of the overall shopping experience of some specific product or service. According to Oliver (1980), customer's performancespecific expectation and expectation disconfirmation are the key indicators of satisfaction. Specifically, customer when the product performance exceeds satisfaction expectation, customer increases; when expectation exceeds the product performance, customer satisfaction decreases. Since product

performance is an important component of brand image, companies could infer the potential influence of brand image on customer satisfaction by identifying the perceptual difference toward a brand between the existing customers and non-users of the brand.

Brand image has a significant customer satisfaction impact especially across the Ε banking, landline, mobile phone, bank and supermarket industries. Chang et al. (2005) identified store infrastructure, convenience, store service and sales activities as the four components of store image, and they all impact customer satisfaction directly. Chitty et al. (2007) also empirically proved the dominant role of brand image in predicting customer satisfaction in the hospitality industry. Moreover, congruence between the brand image self image and customer's would enhance customer satisfaction and customer's preference for the brand.

Customer loyalty could be recognized as the extension of customer satisfaction. Earlier studies define customer loyalty as repeated purchasing behaviors in a narrow

Generally, customer lovaltv sense. stems from customer's approval of a brand, which leads to their continuously purchasing behavior of the brand and thus generates profits for the company. In the brand image literature, brand image is perceived as an important driving force of customer loyalty. For the supermarket industry, favorable store image is very helpful to foster customer loyalty. Even in the virtual context, the impact of brand image on customer loyalty remains significant, and Merrilees & Fry (2002) verified their relationship through surveys at e-commerce companies.

4. SUGGESTIONS AND SCOPE FOR FUTURE STUDY

4.1 ENRICH THE CONNOTATION OF BRAND IMAGE

In the last decade, emotional branding has become a very influential manner of brand management. As suggested by Roberts (2004), brand emotion is the cultural implication embodied in a brand, and emotional branding is a highly effective way to cause customer reaction, sentiments and moods, ultimately forming connection and loyalty with the brand.

Even the traditional brand management pattern based on customer perception now has incorporated emotional branding into it. In the unprecedentedly competitive marketplace, brand emotion is the bond between the brand and the customer, and the key to expanding the market. Future studies could explore the relationship between brand image and consumer behavior from a brand new perspective—brand emotion.

4.2. BRAND IMAGE, CUSTOMER SATISFACTION AND CUSTOMER LOYALTY

The relationship between brand image and customer satisfaction has been studied extensively. However, a majority of these researches were conducted in service industry, such as hotel, supermarket and bank, etc. Whether the results generated from the service industry can be applicable to other contexts (e.g., manufacturing industry, finance industry, real estate industry, etc.) remains to be examined.

Moreover, although the positive impact of brand image on customer satisfaction and customer loyalty has been testified, there still exist minor disagreements between different researches. Specifically, some studies prove that brand image not only influences customer loyalty directly, but also impacts on it through other mediating factors. However, some research results demonstrate that brand image exerts no direct influence on customer loyalty, but it can impact customer loyalty via customer satisfaction. Future studies should further discuss the interrelationships brand among image, customer satisfaction and customer loyalty, and identify a more comprehensive indicator for consumer behavior.
